

**Model No.
ST-20A**

Stark Wireless Door Sensor (external Antenna)

Product Overview:

With micro power consumption, high stability, long distance, battery can last long time. And have low power alert. The door sensor can be installed on door, window, and others which can open and close. When intruder enters into detecting area. It sends alarm signal to alarm console. The wireless transmitting distance can reach 400 meters in open area. It suits for bank, villa, home residence, factory building, market, storehouse, etc

Features:

- Open/Close door optional
- Design by micro power consumption
- Low power alert by led indicator
- Low power alert to alarm panel
- Support N/C (normal close) interface, can connect wired devices (optional) function

Technical Parameters

| | |
|-----------------------------|---|
| Working voltage | DC 3V(Battery) (2 pcs 1.5V/AAA Battery) |
| Alarm Current | ≤8mA |
| Standby Current | ≤3uA |
| Emission frequency | 433.92MHz |
| Operating temperature | -20°C ~ +60°C |
| Wireless transmitting range | External antenna ≥200m |
| Magnet dimension (L*W*H) | 56*14*15.5mm |
| Sensor dimension (L*W*H) | 79*37*20.5mm |
| Humidity | ≤80% |
